Day: 2   **Date:** 02/Jun/2020
Work Description:
Work On Client given bugs.
Day: 3   **Date:** 03/Jun/2020
Work Description:
Work On Client given issue. , Work on issue given by client. 1) Remove 'Business Name' from the form - do not forget to remove the field validation if there is any. - Done 2) Remove field validation on the card-subtitle being required - Done 3) Display form with Hashtag, Address fields regardless of personal / business toggle - Done 4) Filled in all forms for the Setup Wizard 1 and the app crashed (might be due to the country codes not loading in) - Done
Day: 4   **Date:** 05/Jun/2020
Work Description:
Work On Below points. 1) ???????Fixed sub_title now getting an error on saving of the phone number with a phone code checkout screenshot, file: InputFieldCell.swift line: 958 - Solve, It's Index bound issue of form listing. 2) First thing I checked was proxinmity. I tred to save and app crashed. THis is the screenshot of the view that crashed. Solve as mention on above point. 3)Second thing I tested was the edit 'about' and 'offer' on thee attached. The offer didnt appeqr when I viewed the card - Working Fine Checked update and see change on card. 4) So before logging out, I set the allow card to be found on searches to true. THis didnt save. From this screen attached.- Founded API issue
Day: 5   **Date:** 09/Jun/2020
Work Description:
Work on below points. 1) Im not sureif you got it but the country code isnt saving in step 1 of settings. I have images if needed Would you like me to mention as I find things? - solved and found one API issue. 2) Setup Wizard Card not display properly Design issue. - Solved 3) I saved my paypal details successfully in step 7. That should then be showing a make payment button on card (when this field is populated). But is not showing - finding for issue.
Day: 6   **Date:** 10/Jun/2020
Work Description:
Work on below points. 1) I looked further this morning and found that if the country code is populated by keystroke, it doesnt send. If populated by clicking on the actual list of country codes it does, then saving and requesting correctly. The problem with relying on that is if the country code is out of view, users will type in the box and assume is fine. Thats what I did. How can we send what is actually in the input rather than what is shown in the list? - Check for issue and found that user not able to type in as we are opening picker view instead of keyboard. 2) Just a couple of minor things as mentioned. Also I saved my paypal details successfully in step 7. That should then be showing a make payment button on card (when this field is populated). But is not showing - Check for issue and found that paypal payment button only show on other accosiate cards.
